

Internationalisation and Sustainable Development: Accra Technical University's Experience

Alice C. Mensah & Phyllis Otu
Accra Technical University
Ghana

The study examines how internationalisation strategies promote sustainability across operations, curricula, and community engagement at ATU. A qualitative method approach was employed by utilizing document analysis and direct observations to assess ATU's sustainability initiatives and their impact. It was found that robust international collaborations, curriculum reforms, and sustainable campus operations were the success stories. However, challenges such as financial constraints and resistance to change hinder full implementation. The findings offer valuable insights for HEIs aiming to integrate sustainability, emphasizing the importance of international partnerships and holistic institutional approaches.
